Each replicate
repeated Replicates times
Initialise replicate
Landscape, initial individuals
Each year
0 to Years − 1, stops at extinction
Update environment
Landscape changes, gradient, K
Each season
repeated RepSeasons times (reproductive seasons)
Management
Translocation, harvesting
First season only
Reproduction
Mating, gene inheritance
Survival of adults
SurvSched = 0; unstructured: all die
Emigration
Leave natal patch
Transfer
Kernel, SMS, CRW
Settlement
Stop or move on
Survival, development
Deaths applied
SurvSched = 0
survival of juveniles
SurvSched = 1, unstructured
survival of all stages
SurvSched = 2
development only
Annual survival
SurvSched = 2 only
End of year
Ageing, maximum age
Final outputs
Year = Years
Survival
Dashed: only in the cases given
